owenritchie.ca ❖ github.com/owenritchie ❖ linkedin.com/in/owenritchie2004 ❖ owenritchie04@gmail.com

Engineer skilled in building efficient, resilient & data-intensive software products in the cloud. Experience leading database migrations, owning production pipelines/models, and driving product vision forward with a creative mindset. My recent work includes [Canada's G7 Accountability Report](#) and a customer footprint product for Kinaxis' CEO and CPO. Valid Level 2 Security Clearance (Secret).

Education

Honours Bachelor of Science, Computer Science - *University of Ottawa*

Expected Graduation: Dec 2026

- Courses like: Design & Analysis of Algorithms, Modelling & Simulation, Data Structures & Algorithms, Software Engineering

Work Experience

Data & Analytics Engineer Intern — Kinaxis

Sept 2025 - Aug 2026

- Migrated ~**90M** rows of Eloqua data from Snowflake to Google Cloud Storage using Python and Cloud Run, ensuring idempotency across **11** pipelines and eliminating an estimated **100k+** CU-Hours in yearly Fabric consumption (around **\$18k** in savings)
- Delivered a customer footprint dashboard for the incoming Kinaxis CEO and our CPO in **1 month** using Dataflows, BigQuery, and an internal log collector API - praised by leadership as filling an immediate strategic gap
- Used dbt to build staging, intermediate, & mart layers for **3** Google Analytics properties (including kinaxis.com) that together handle **250K+** events daily, and visualized this data inside a multi-report Power BI app for the CMO and Web Marketing team
- Migrated **10+** years of ServiceNow & LogicMonitor data from Postgres to hive-partitioned GCS buckets using Python and dlt, laying the groundwork to decommission our Postgres and Grafana instances and saving our FinOps lead **2+** days in manual reporting
- Analyzed **110+** Grafana reports using Bash, Python, and SQL, identifying **80%+** as unused or redundant candidates for deprecation, and delivered cloud provider filter enhancements (Azure, AWS, etc.) to the Director of Cloud Services
- Optimized a Win/Loss predictive model in BigQuery ML using Gemini 2.5 and Salesforce comments to classify B2B sales opportunities by likelihood of closing

Data Analytics Intern — Global Affairs Canada

Jan 2025 - July 2025

- Designed a multi-source pipeline that fetched World Bank, OECD, UN, and WEF indicators via REST API, mapping ISO codes to GAC recipient codes, and parallelizing ingestion with Python's ThreadPoolExecutor to reduce runtime by **99.8%**
- Built a development indicators dashboard, enabling **10+** Directors to model what-if policy scenarios across G7 development sectors and run exploratory analysis on HDI, mortality, poverty, and education data from **190+** countries
- Curated and validated **5+** years of cross-institutional data backing **50+** statistics in Canada's G7 Accountability Report (Kananaskis 2025), spanning human development, governance, and security across ODA-recipient countries

Data Science Intern — Poisson Consulting Ltd.

May 2023 - Sept 2023

- Cleaned and analyzed **500,000+** records using R and Tidyverse packages to support fish population revitalization efforts in the Lower Columbia River
- Mapped **3,000+** salmon redds from weekly drone surveys in QGIS, allowing clients to optimize dam water levels for **95%+** egg survival rates
- Volunteered as Teaching Assistant at Columbia Mountains Institute of Applied Ecology, instructing **15** students on statistical applications of R in biology and ecology

Personal Projects

Honours Project Portal (2026 - Present) — Building the backend for an app that manages UOttawa's Honours project applications using Supabase for data/auth, a .NET API layer, and Terraform-provisioned AWS S3 for file storage — *(Supabase, AWS S3, .NET, Terraform)*

Mill (2026 - Present) — Full-stack project planner with a node-based canvas, table view and text editor, facilitating interactive planning in tandem with conversational planning via chat. Supports local (Ollama) and cloud (Claude) models — *(Next.js, Tauri, Drizzle, Typescript)*

Spotify Analytics (2026) — Analytics dashboard for my Spotify account, tracking metrics such as total listening time, track length and when I listen. Automated data ingestion and modelling with Python, dbt & Github Actions in my 'data' repo — *(dbt, React, Typescript, Python)*

Technical Skills

Languages: Python, SQL, TypeScript, R, Java, JavaScript, C#, HTML & CSS, Bash/PowerShell

Frameworks & Libraries: dbt, Pandas, Apache Spark, TensorFlow, Node.js, OpenAI, Vertex AI, Claude, React, Astro.js

Infrastructure: GCP, Snowflake, Postgres, Supabase, Airflow, Linux, Git, GitHub Actions, Docker, Power BI, Looker, Grafana, Terraform
