Analytics engineer with 2+ years of experience building cloud data pipelines, executive-level reports and distributed ML models, most recently at Kinaxis, an enterprise SaaS. Available January 2027 for full-time data, analytics or ML roles.

Education

Honours Bachelor of Science, Computer Science — *University of Ottawa* **Sep 2022–Dec 2026**

- Dean's List. Relevant classes: Modelling & Simulation (Stochastics, DEDS), Artificial Intelligence, Design & Analysis of Algorithms

---

Work Experience

Data & Analytics Engineer Intern — *Kinaxis* **Sep 2025–Aug 2026**

- Developed a **CEO-facing** customer footprint tool aggregating **500M+** concurrent tracked parts, scenarios & users across **400+** *Maestro* customers, using an internal log collector API, dbt, BigQuery & Datadog; praised by leadership as filling a strategic gap
- Architected ELT pipelines for **3** Google Analytics properties (including kinaxis.com & rapidresponse.kinaxis.com), processing **250k+** daily events in GCP with dbt, GCS & Cloud Run; automated the delivery of reported metrics to the **CMO**
- Cut **100k+** CU-hours of yearly Fabric compute (**~$18k saved**) by optimizing dataflows at their source with BigQuery, dbt & DAX
- Migrated **~90M** rows of Eloqua campaign data from Snowflake to BigQuery with zero downtime using dbt, Python & Snowsight
- Created a classifier in BigQueryML labeling Salesforce opportunities as Win/Loss from SDR comments, **replacing manual review**
- Built a Chrome extension to **optimize GCP pipeline cost** against committed cloud spend, using Vertex AI, TypeScript & BigQuery
- Migrated **10+** years of ServiceNow & LogicMonitor data from Postgres to GCS buckets using Python, dlt & dbt, laying the groundwork to decommission Postgres and Grafana instances and save our FinOps lead **2+** days/month in manual reporting

Data Analytics Intern — *Global Affairs Canada* **Jan 2025–Jul 2025**

- Validated **5+** years of cross-institutional data backing **50+** statistics in Canada's G7 Accountability Report, using Python
- Reduced API response times by **99.8%** by implementing multithreading to ingest data from the World Bank, OECD, UN and WEF
- Deployed a development indicators tool to **10+** Directors to model the impact of policy decisions across aid funding scenarios
- Delivered reports on the Sahel and CARICOM covering **25+** metrics, including HDI and electrification, using Matplotlib, Pandas & Scikit-learn to estimate missing indicator values

Data Science Intern — *Poisson Consulting Ltd.* **May 2023–Sep 2023**

- Analyzed **500k+** salmon egg records in R & Tidyverse for publications led by senior computational biologists, updating the scripts as package versions changed so published analyses stayed reproducible year over year
- Mapped **3k+** salmon redds from weekly drone surveys in QGIS to estimate how dam operations affected egg survival
- Volunteered as a TA at Columbia Mountains Institute of Applied Ecology, teaching **15** students how to apply R to ecological data

---

Projects

Data Repository — *dbt, SQL, Python, GitHub Actions, Neon (Postgres)* **2025–Present**

- Built an analytics repository that automates ingestion (Python) and transformation (dbt) for my personal projects
- Powers *Spotify Analytics* (React, my listening history) and *OC Transpo Analytics* (Streamlit, Ottawa bus fleet monitoring)

Agentic Project Planning Application — *Next.js, React, TypeScript, Tauri, Rust, Drizzle, Claude SDK* **2026–Present**

- Built a full-stack macOS project planner with a node-based canvas and chat-based planning via Ollama & Claude models
- Packaged the app as a .dmg with Tauri & a GitHub Actions release workflow, storing data locally in libSQL via Drizzle

UOttawa's Honours Project Portal — *Supabase, AWS S3, SQL, Terraform, C#, ASP.NET, Swagger UI* **2026–Present**

- Integrated an ASP.NET Core API with Supabase Auth for a project portal built for **200+** students per semester, passing JWT identity into Postgres so RLS governs every request; validated RBAC across all 24 endpoints using Swagger UI
- Designed S3 attachment storage on Terraform-provisioned Supabase with per-file access policies, verified by **27** pgTAP tests

---

Technical Skills

Languages: Python, SQL, R, TypeScript, JavaScript, Java, Bash

Libraries/Frameworks: dbt, Pandas, Scikit-learn, Apache Spark, TensorFlow, OpenAI, Vertex AI, Claude SDK, React, Node.js

Infrastructure: GCP, AWS, Snowflake, BigQuery, Postgres, Supabase, GCS, S3, Cloud Run, GitHub Actions, Airflow

Reporting: Power BI, Looker Studio, Grafana, Datadog, Metabase, R Markdown, Jupyter, Google Analytics

Dev Tools: Git, Linux, Docker, Claude Code, Devin, Codex, GitHub Copilot
